

Feed me *food & veg waste, i'll give you* *Cooking Gas...*

What more can you ask for?

It produces LPG, yields organic manure, gets rid of garbage. Wondering Who am I? I am Bio-digester. Imagine a lifetime's supply of free cooking gas and organic manure, and the satisfaction of not only reducing your carbon footprint but also not adding to the piles of garbage on the streets leading to a better disease free hygienic environment. Biogas can be produced from sustainable raw material and organic waste like food waste, market vegetable waste, animal dung, poultry litter, municipal sewage, press mud, etc., locally, reliably, simply and efficiently. If you have 4 people at your home, your kitchen wastes could earn half a cylinder every month.

So Grab!!! Here is your solution for **LPG savings, Recycling Garbage and Efficient Organic Manure.**

Turn your *food & veg* waste
to *Cooking Gas...*

Turn your **food & vegetable** waste to **cooking gas**

Canteen Waste, food waste, garden green waste, and night soil can be utilised to produce electricity for lighting purpose and also for cooking in canteens.
